Direct contact details redacted for public download | Contact available through the portfolio website

SUMMARY

Analytically driven Computer Science graduate with hands-on experience in technical support and data systems at Saint Mary's University. Skilled in Python, Pandas, NumPy, and SQL, with a growing proficiency in data analytics and visualization. Adept at identifying patterns, troubleshooting technical issues, and improving information workflows. Known for clear communication, structured thinking, and a strong commitment to data accuracy and user-centric solutions.

SKILLS

- Python (Pandas, NumPy, Flask)
- Git & GitHub
- Data Visualization (Matplotlib, Seaborn)
- SQL & Relational Databases
- Data Analysis & Pattern Recognition
- HTML
- Analytical thinking & Problem Solving
- Adaptability in Fast-Paced Environments
- Microsoft Excel
- Effective communication

EXPERIENCE

Data Analyst

IBM OPOR Project (via Experis) | Location redacted | March 2026 - May 2026

- Contracted through Experis to support IBM's One Person One Record (OPOR) healthcare initiative, processing and maintaining large volumes of digital records.
- Managed end-to-end data operations for the One Person One Record (OPOR) initiative, including entry, validation, cleaning, and reconciliation across multiple systems to ensure a single, consistent, and accurate patient record at scale.
- Partnered with clinical, administrative, and IT teams within the OPOR program to gather requirements and support data-driven decision-making aimed at unifying patient health records across the healthcare system.
- Ensured full compliance with HIPAA and PHIPA regulations throughout OPOR data processes, upholding strict privacy and security standards in the handling of consolidated patient health information.
- Supported the migration of legacy healthcare data into the OPOR platform, preserving data integrity and continuity of care while transitioning fragmented records into a unified, person-centred system.

Data Content Intern

Food and Agriculture Organization (FAO, UN) | Location redacted | Sept 2025 - Dec 2025

- Developed and maintained geospatial datasets for agricultural analysis, applying international metadata standards (ISO 19115, DCAT) to ensure interoperability, discoverability, and data quality across FAO systems.
- Contributed to frontend development of the Hand-in-Hand Platform, resolving UI/UX bugs, refining visual layouts, and improving accessibility using TerriaJS, React, and CSS/SCSS.
- Designed and standardised geospatial map styling, including colour schemes, legends, and symbology, to deliver consistent, user-friendly interfaces across agricultural data layers.
- Collaborated cross-functionally with IT officers and the HiH coordination team to publish datasets, technical notes, and platform updates, advancing FAO's digital public goods and data transparency initiatives.

End User Support Technician

Saint Mary's University | Location redacted | Nov 2022 - Dec 2024

- Analysed service and incident data to identify recurring technical issues and recommend workflow improvements.
- Supported data accuracy and access management through Active Directory and Microsoft Azure.
- Delivered clear technical explanations to non-technical users, strengthening stakeholder communication skills.

PROJECTS

- Developed a Grocery Deals Finder web application using React, Vite, and the Flipp API. Implemented keyword search, store filtering, budget tracking with a dynamic basket, CSV export, and modern responsive UI. Overcame challenges integrating external APIs, debugging inconsistent data, and deploying clean UI/UX design.
- Built a spam detection model using Python, pandas, and scikit-learn to classify messages as spam or non-spam. Applied NLP techniques including tokenization, stemming, stop word removal, and engineered features using TF-IDF. Evaluated model accuracy using classification metrics and confusion matrix.

- Developed a web application for managing inventory and budget projections and designing a relational database using MySQL for efficient data handling. Utilized Python, HTML, CSS, and Flask.

EDUCATION

Bachelor of Science: Computer Science

Saint Mary's University | Completed November 2024
